# CNNs cont'd

Michael Wollowski

This presentation is a select summary of the following document: https://cs231n.github.io/convolutional-networks/

## Conceptual Differences between FFN and CNN

- On left a FFN
- On right, CNN which transforms a 3D input into a 3D output.
- The depth/height/width block gives a sense of the type of processing

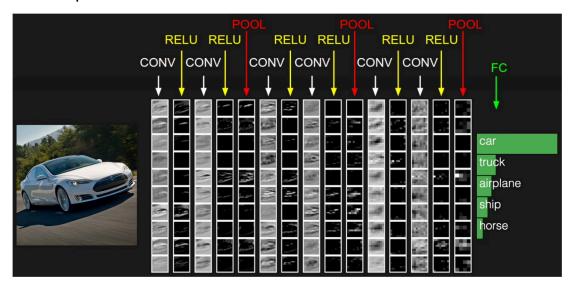

### ConvNet

- ConvNet is a simple CNN for CIFAR-10 classification.
- CIFAR-10 contains 60,000 32x32 color images in 10 different classes.
- The classes represent airplanes, cars, birds, cats, deer, dogs, frogs, horses, ships, and trucks.
- There are 6,000 images of each class

#### ConvNet

- Input: [32x32x3] raw pixels in RGB
- 12 Filters: 3x3 filter size, 1-bit stride, 1-bit padding
- After convolution: [32x32x12]
- RELU layer
- After RELU, still [32x32x12]
- POOLing: 2x2 receptive field, 2-bit stride
- After pooling: [16x16x12].
- Fully-connected layer: computes the class scores
- [1x1x10]

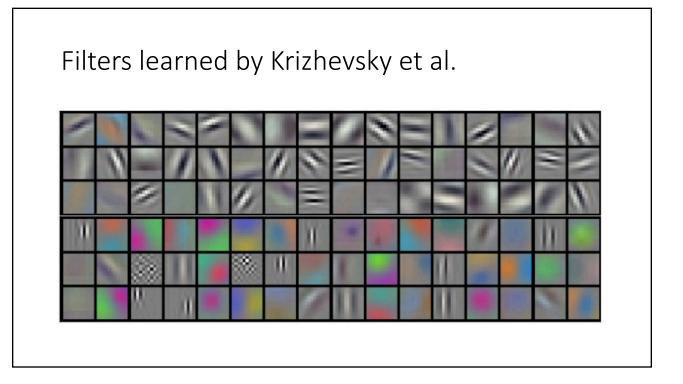

## Sample Activations of a ConvNext

### Specifying a CNN

- Hyper-parameters that an engineer needs to specify:
  - Number of Convolutional layers.
  - Depth, i.e. the number of filters. This may be different for different convolutional layers
  - Filter size, common values are 3x3 and 5x5
  - Stride of the filter application, typically it is 1 bit
  - Amount of padding, zero or one or two.
  - · Number and placement of pooling layers
  - Size of pooling window, typically this is 2x2
  - Stride for pooling, typically, this is 2 bits
  - Pooling function: typically max

#### Location of learning: Weights and filter values Vectorization Concatenation (16x12=192) 192x1 In $oldsymbol{k}_{p,q}^l$ and $oldsymbol{b}_q^l$ , l indicates the layer, p and q denote the map indices of current and Average 28x28 next layers, respectively. 10x192 10x1 gray image Fully connection Input layer Convolution layer C1 Pooling layer S1 Convolution layer C2 Pooling layer S2 Fully connection layer FC Output layer

# Pattern Recognition

• What did we learn?

X1	X2	h1	h2	y1
0	0	0	0	0
0	1	1	0	1
1	0	1	0	1
1	1	2	1	0

Hierarchical Nature of Pattern Recognition
