Step 2: Install the latest version of Python

All students must have the same version of Python as your instructor has.

Get help as needed in following these instructions. The installation may ask you to supply credentials for an administrator (**localmgr**) account; just ask for help if that is not familiar to you.

1. Visit https://www.python.org/downloads/release/python-370/.

Scroll down the page and select the Windows x86-64 executable installer, as shown below:

Version	Operating System	Description	1
Gzipped source tarball	Source release		4
XZ compressed source tarball	Source release		•
macOS 64-bit/32-bit installer	Mac OS X	for Mac OS X 10.6 and later	(
macOS 64-bit installer	Mac OS X	for OS X 10.9 and later	
Windows help file	Windows		
Windows x86-64 embeddable zip file	Windows	for AMD64/EM64T/x64	
Windows x86-64 executable installer	Windows	for AMD64/EM64T/x64	
Windows x86-64 web-based installer	Windows	for AMD64/EM64T/x64	
Windows x86 embeddable zip file	Windows		
Windows x86 executable installer	Windows		
Windows x86 web-based installer	Windows		

Click on the link to Save the file to your computer.

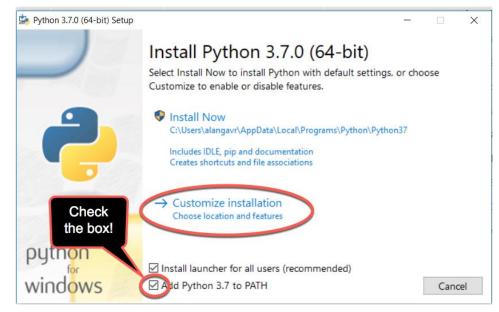

These instructions continue on the next page.

- 2. **Double-click the downloaded file** to run the installer, being careful to **follow these instructions**:
 - a. At the *initial installation window*, as shown below:

Check the box for "Add Python 3.7 to PATH" (so both boxes on that page should end up

checked).

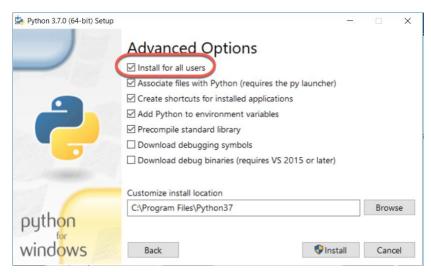

Select "Customize installation."

b. On the window that next appears, all boxes should be checked.

- c. On the window that appears after that:
 - Check the box for "Install for all users".
- d. Click *Install* and let the installation continue. It takes a minute or two (or three) on most modern computers.

e. At the end, select *Close*.
