

s-Domain Circuit Elements

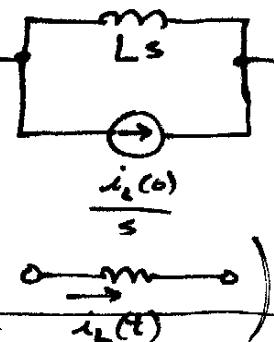

\* Summary :

RESISTORCAPACITOR

-OR-

INDUCTOR

-OR-

\* Why it works:

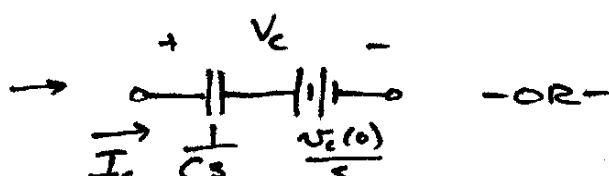

Resistor

$$\begin{array}{c} + v_R - \\ \text{---} \\ \text{---} \\ \rightarrow R \\ \downarrow i_R \end{array} \rightarrow v_R = R i_R \xleftarrow{\text{L.T.}} V_R = R I_R$$

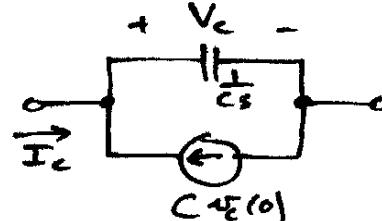

(Laplace transform)

Capacitor

$$\begin{array}{c} + v_c - \\ \text{---} \\ \text{---} \\ \rightarrow C \\ \downarrow i_c \end{array} \rightarrow \begin{aligned} v_c &= \frac{1}{C} \int_0^t i_c(x) dx + v_c(0) \xleftarrow{\text{L.T.}} V_c = \frac{1}{C} \frac{I_c}{s} + \\ i_c &= C \frac{dv_c}{dt} \xleftarrow{\text{L.T.}} I_c = C(s V_c - v_c(0)) \end{aligned}$$

-OR-

Inductor

similar analysis as capacitor.
