

IDEAL GASES

OBEY

(NON-IDEAL GAS)

HOW DO YOU FIND m IF n IS KNOWN?

- DIVIDE EQ. 1 BY M
- MULTIPLY " " " "

IN $\frac{g}{mol}$ OR $\frac{kg}{k-mol}$ OR _____

WRITE AS MANY OTHER VERSIONS OF THE IDEAL GAS EQUATION AS YOU CAN:

-
-
-
-

MIXTURES of GASES

TWO DIFFERENT WAYS TO INDICATE Composition

ANALYSIS	ANALYSIS
$m_f_i =$ _____	$y_i =$ _____

$$m_{f_i} =$$

$$y_i =$$

$$\sum m_{f_i} = \underline{\hspace{2cm}}$$

$$\sum y_i = \underline{\hspace{2cm}}$$

HOW DO YOU FIND m_i IF YOU KNOW N_i ?

NOW FOR THE MIXTURE...

-OR-

$$\boxed{= \underline{\hspace{2cm}}}$$

SIMILARLY

$$\boxed{= \underline{\hspace{2cm}}}$$

↑ DEFINES THE

APPARENT (AVERAGE)
IDEAL GAS CONSTANT
FOR MIXTURE
(MASS BASIS)

DALTON'S MODEL

ASSUMES

- WRITE EQ. 1 FOR A MIXTURE
SOLVE IT FOR P_{MIX}

$$P_{MIX} = \quad (2)$$

- NOW WRITE EQ. 1 FOR COMPONENT i & SOLVE IT FOR P_i
USING DALTON'S MODEL.

$$P_i = \quad (3)$$

WRITE A SENTENCE DEFINING PARTIAL PRESSURE!

PARTIAL PRESSURE IS

COMPARE EQ. 3 TO EQ. 2. HOW DOES P_i COMPARE TO P_{MIX} ?

$$P_i =$$

AND \therefore

$$\sum P_i =$$
